WALLRIBBON
SLAT WALLS & WALL PANELS IN SCANDINAVIAN DESIGN
FOR BOTH HOMES AND OFFICES

SWEDISH MADE ACOUSTIC PANEL

An acoustic panel is a sound absorber used to create a better sound environment. Historically, it has mainly been used to dampen sound and noise in sports halls and other public environments. In recent years, it has developed to also become an interior detail in more private environments. Our sound-absorbing slatted walls are available in different types of wood and color shades so that you can easily find a solution that suits both home and office environments.

With us, you will find ribbed panels with the sound-absorbing acoustic felt, Recosilent. Our acoustic panel is Swedish-made in Sweden’s largest veneer factory, Wallsystems in Tranås.

We are a Swedish company with value-driving factors such as Scandinavian acoustic design, greater flexibility and higher quality. Based on these, we create favorable sound landscapes for different types of environments.

With broad knowledge and long experience, we develop and manufacture products in our own factories in Vittaryd and Tranås. We are the largest in Sweden in wood veneer and through an ongoing collaboration with several prominent designers, we are always at the forefront when it comes to acoustic design.

The ribs are mounted on our high-quality RecoSilent felt, which is made from 100% recycled plastic and provides pleasant acoustics in the room.

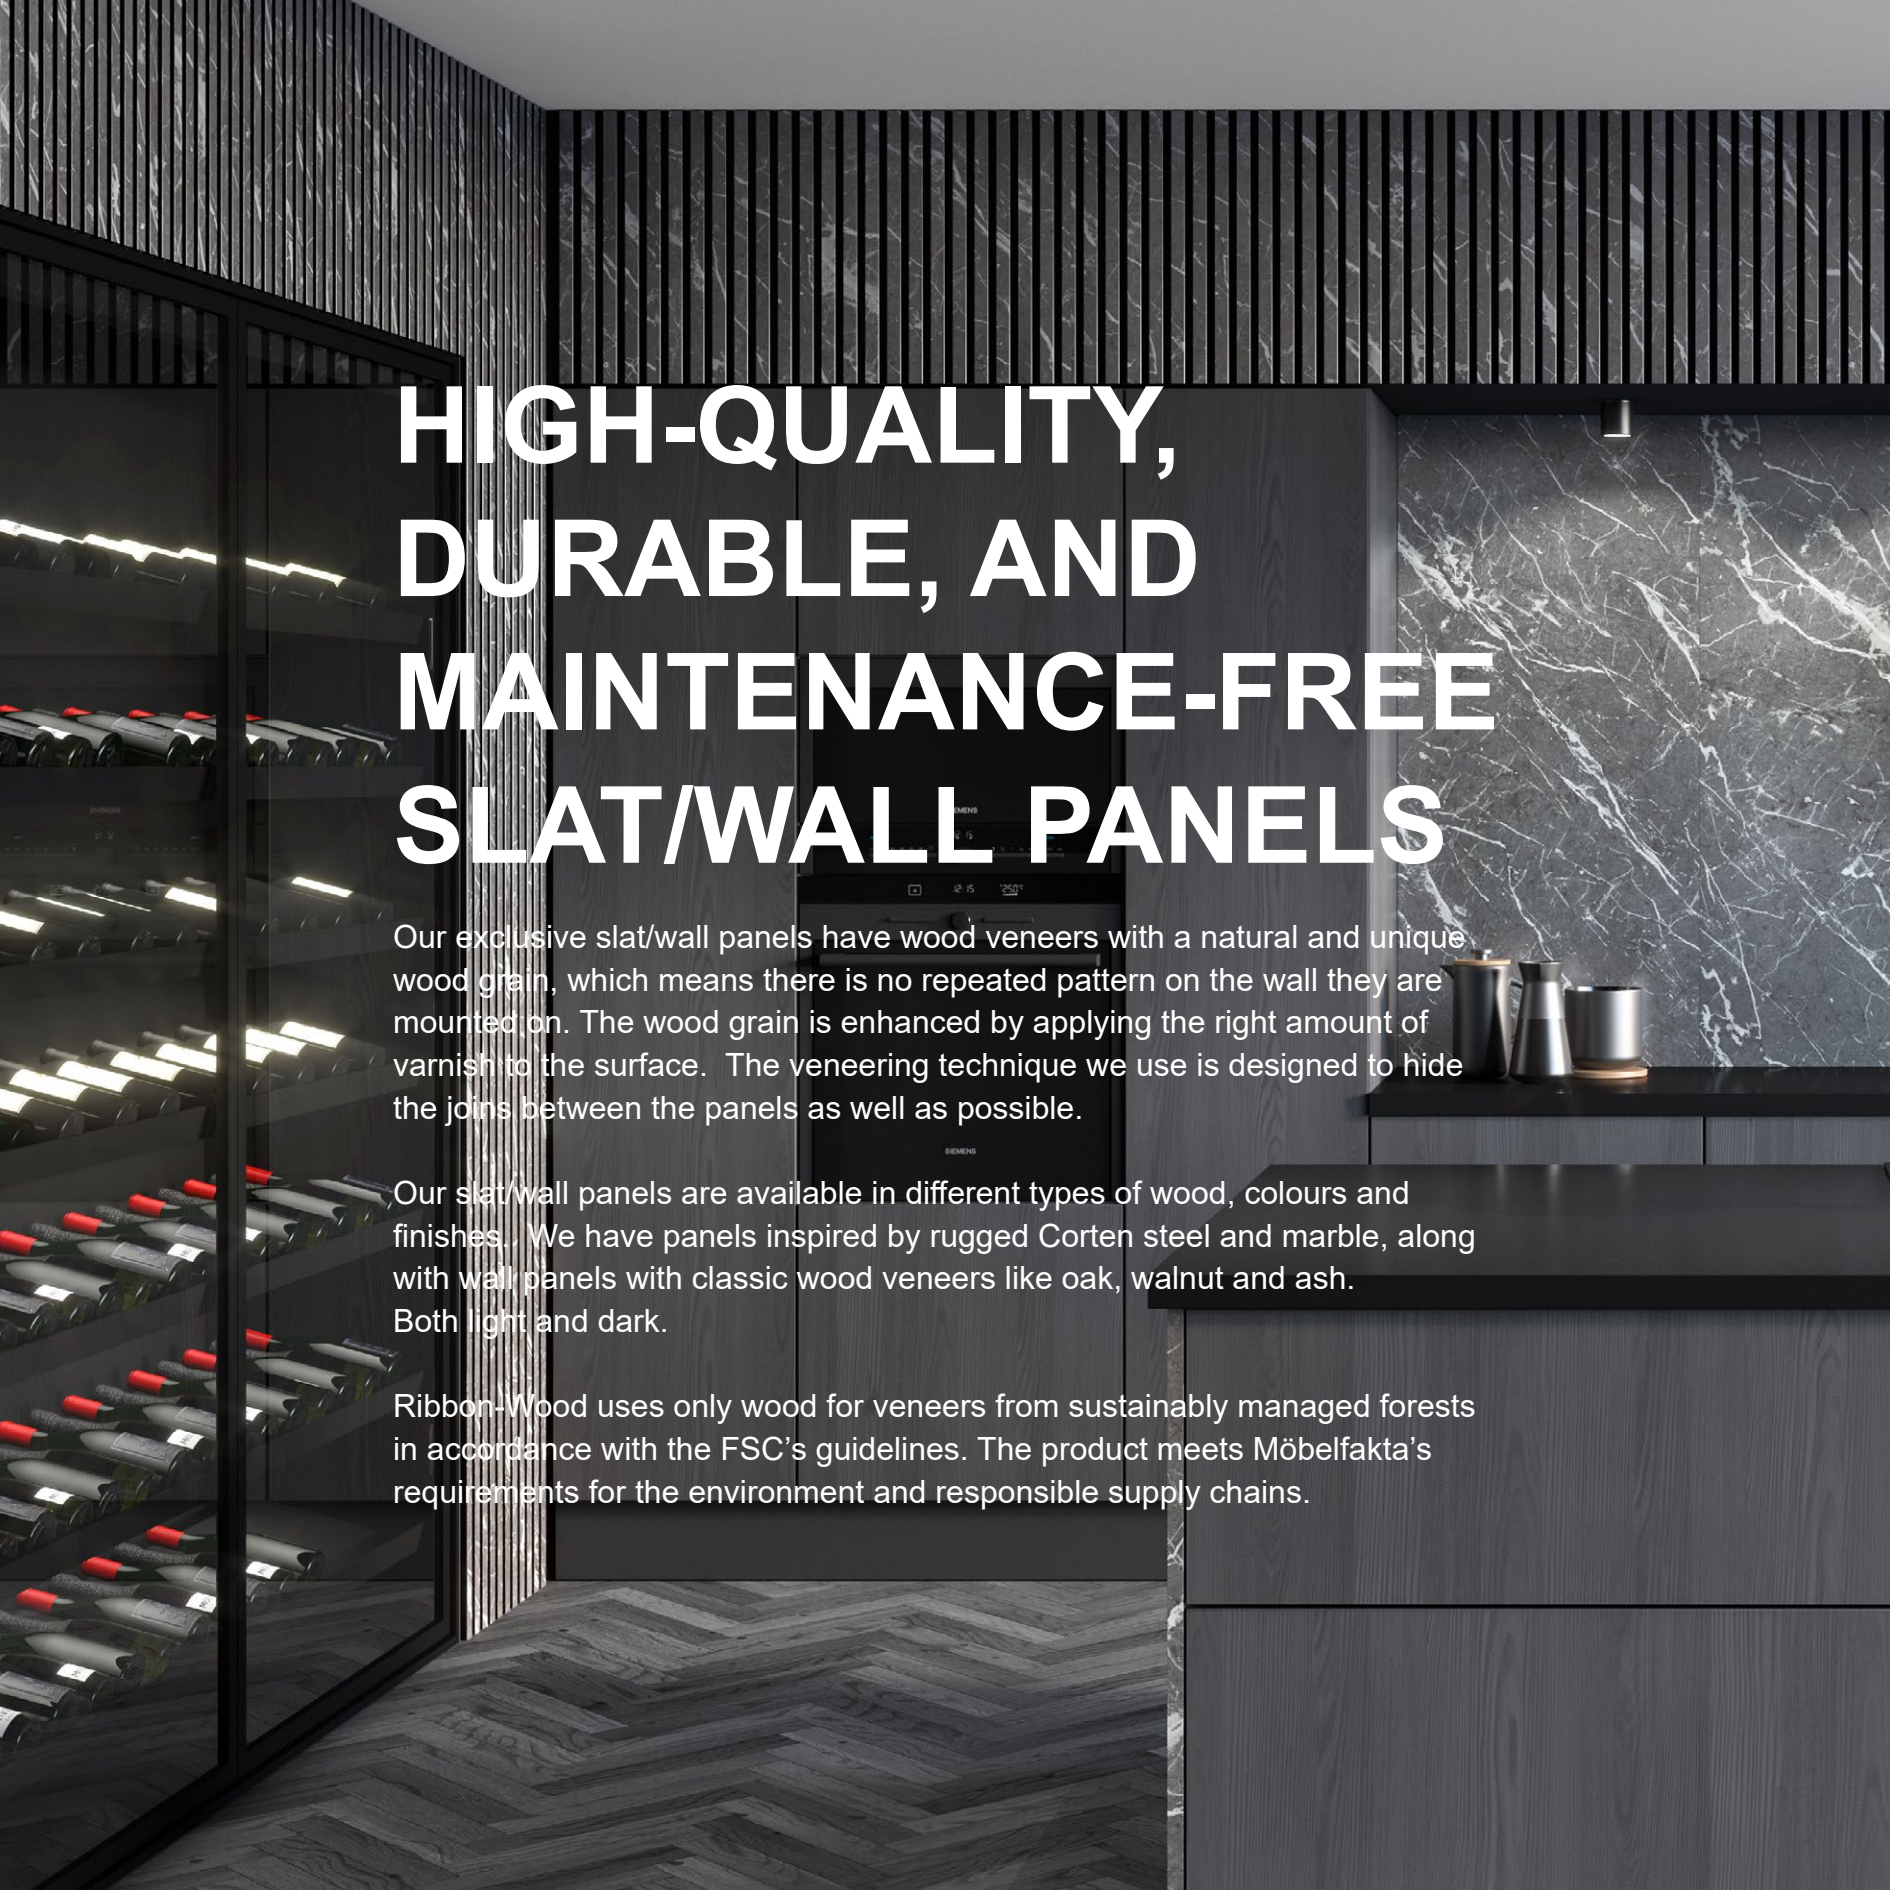
OUR ACOUSTIC PANELS ARE EASY TO INSTALL

Our sound-absorbing panels with ribs are easy to install, and we also offer all the accessories that are necessary for a successful installation. For those of you who are unsure of how one of our panels will match your existing interior, we also offer the possibility to order product samples to make your final decision easier.

Our goal is that everyone, regardless of interior style, should be able to find an acoustic panel that matches the pre-existing interior design naturally. To achieve this, we have constructed our panels according to a stripped-down minimalistic design and used natural wooden materials that will fit into a variety of interiors.



HIGH-QUALITY, DURABLE, AND MAINTENANCE-FREE SLAT/WALL PANELS

Our exclusive slat/wall panels have wood veneers with a natural and unique wood grain, which means there is no repeated pattern on the wall they are mounted on. The wood grain is enhanced by applying the right amount of varnish to the surface. The veneering technique we use is designed to hide the joins between the panels as well as possible.

Our slat/wall panels are available in different types of wood, colours and finishes. We have panels inspired by rugged Corten steel and marble, along with wall panels with classic wood veneers like oak, walnut and ash.
Both light and dark.

Ribbon-Wood uses only wood for veneers from sustainably managed forests in accordance with the FSC’s guidelines. The product meets Möbelfakta’s requirements for the environment and responsible supply chains.
